Abstract

The invention relates to compounds of formula (I) for treating for example sexual dysfunction, wherein R¹ is optionally substituted C₁₋₆alkyl, optionally substituted carbocyclyl, optionally substituted heterocyclyl, hydrogen, C₁₋₆alkoxy, -NR² R³ or -NR⁴SO₂R⁵; X is the linkage -(CH₂)_n- or -(CH₂)_q-O- (wherein Y is attached to the oxygen); wherein one or more hydrogen atoms in linkage X may be replaced independently by C₁₋₄alkoxy; hydroxy; hydroxy(C₁₋₃alkyl); C₃₋₇cycloalkyl; carbocyclyl; heterocyclyl; or by C₁₋₄alkyl optionally substituted by one or more fluoro or phenyl groups; n is 3, 4, 5, 6 or 7; and q is 2, 3, 4, 5 or 6; and Y is phenyl or pyridyl, each of which may be substituted; or two R⁸ groups on adjacent carbon atoms together with the interconnecting carbon atoms may form a fused optionally substituted 5- or 6-membered carbocyclic or heterocyclyic ring.
